BETTER FOR YOUR PET, BETTER FOR YOU: HOW FEAR FREE IS CHANGING VETERINARY VISITS

For many pets and their owners, going to the veterinarian can cause fear, anxiety, and stress. But when you choose a veterinary professional who is Fear Free Certified®, you can rest assured they will be doing their best to reduce your pet's stress while also promoting their happiness and wellbeing.

Founded by "America's Veterinarian" Dr. Marty Becker, Fear Free is an education company that helps animal care professionals learn how to alleviate fear, stress, and anxiety in pets and helps pet owners find professionals who will help make your pet's time with the vet, groomer, or trainer something they look forward to.

WE ARE PROUD TO HAVE FEAR FREE CERTIFIED® PROFESSIONALS **ON OUR TEAM**

We've always worked hard to provide the best care for your pets. Now, we know that there are ways to make your pet's healthcare even better. We're proud that our team members are evolving with veterinary medicine and are committed to looking after both your pet's physical and emotional wellbeing.

We created Fear Free Happy Homes to give you—the loving, doting pet owner-full (and FREE) access to the most cutting-edge content and education to help brighten and enrich your pet's life to the fullest. We want to give you all the tools to enhance your pets' emotional wellbeing and provide them with the best in-home enrichment.

You'll find a lot of false (and harmful!) pet education on the internet, but not here. Our contributors are recognized as the leading experts in their fields of veterinary medicine, animal handling, training, and research. We take pride that 100% of our content is reviewed by board-certified veterinary behaviorists.

Visit fearfreehappyhomes.com and learn how to give your pet their best life today.

Made possible by

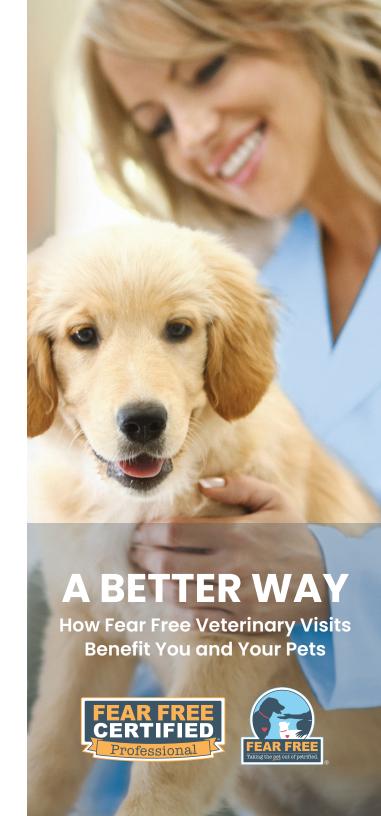

Many signs of fear, anxiety, and stress in pets are difficult to detect. Here are some of the most common signs that your pet might be feeling less than calm and content.

TAIL DOWN, CLOSEN TUCKED, OR HIGH OVER TO YOU OR CLIMBING UP

(circling, barking, not able to sit still) YAWNING

PACING WHINING, GROWLING, PILOERECTION (HAIR UP) SNARLING,

HYPERVIGILANCE OR BITING

(looking around everywhere, LUNGING seemingly paranoid) DILATED PUPILS

LICKING LIPS, OR LIPS DRAWN BACK

TURNING AWAY LITE WHEN YOU LOOK AT HIM, OR TURNING AVOIDING VETERINARY HIS BACK TO STIMULI TEAM MEMBERS

THE FEAR FREE **VETERINARY VISIT**

During a typical Fear Free veterinary visit, the practice team members might use the following strategies:

- * Initially avoid eye contact with your pet and focus on you instead
- Provide nonslip surfaces for your pet to stand or rest on to improve balance and enhance stability
- Use gentle pressure to soothe the pet using a towel or compression garment
- * Create a calming environment with pheromone diffusers, aromatherapy, relaxing music & gentle lighting
- * Prescribe anti-anxiety or other calming medications & supplements
- * If your pet is showing excessive signs of fear, anxiety, or stress, the team may delay or postpone the exam or other procedures until a time when the pet is calmer and more relaxed

5 WAYS YOU CAN HELP MAKE THE VETERINARY VISIT FEAR FREE FOR YOUR PET

Prep your pet

Positively accustom the pet to their carrier or restraint device and condition happy experiences in the vehicle.

Limit food before the appointment unless medically contraindicated

Bringing pets in hungry increases the reward value of food during the visit to better condition the pet to the positives of care.

Explore waiting room alternatives

Work with the receptionist or other team members to determine the optimal location to wait with your pet prior to care.

Be open to non-traditional techniques

This can include not taking the pet's temperature, examining the pet in your lap or on the floor, and using treat and toy coaxers to move animals willingly onto the scale, into the exam room, and onto the table.

Consider new strategies

In many cases, pets will benefit tremendously from pre-visit medications, supplements, or sedatives, as well as conditioning the pet to aspects of vet care prior to the next visit.
